# YOU CAN EXPECT

CONTRIBUTE TO ENVIRONMENTAL SUSTAINABILITY BY USING OUR PRODUCTS

**PRODUCTION OF EU CERTIFIED  
MEDICAL USE DISINFECTANTS**

---

**PRODUCTION OF CHEMICALS  
ACCORDING TO OUR  
FORMULATIONS WITH YOUR  
BRANDING**

---

**PRIVATE LABEL PRODUCTION OF  
CLEANING AGENTS BASED ON YOUR  
FORMULATIONS**

---

# PRODUCTION LINE DESIGN

**Completeness** Production line manufactures products from raw material to final product. It includes machinery needed for mixing of disinfectant formulation, extrusion of plastic bottles, testing

bottle integrity, filling bottles with the disinfectant, closing bottle with caps, labelling and packaging of the final product in cartons and on pallets.

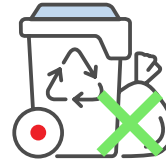

**Ecology** Our planet is environmentally overloaded which is why we strive to reduce our environmental impact by limiting CO2 emissions, eliminating

waste and reusing production materials. We achieve this with completeness of production line, recycling procedures inside the production line and reducing CO2 emissions.

**Ex zone** We guarantee compliance with the Atex directives.

**No transport of empty bottles = no CO2 emissions**

**Recycling of used materials**

We recycle production waste.

**We limit plastic pollution**

We recycle waste materials and used bottles.

**Work safety is our 1<sup>st</sup> priority**

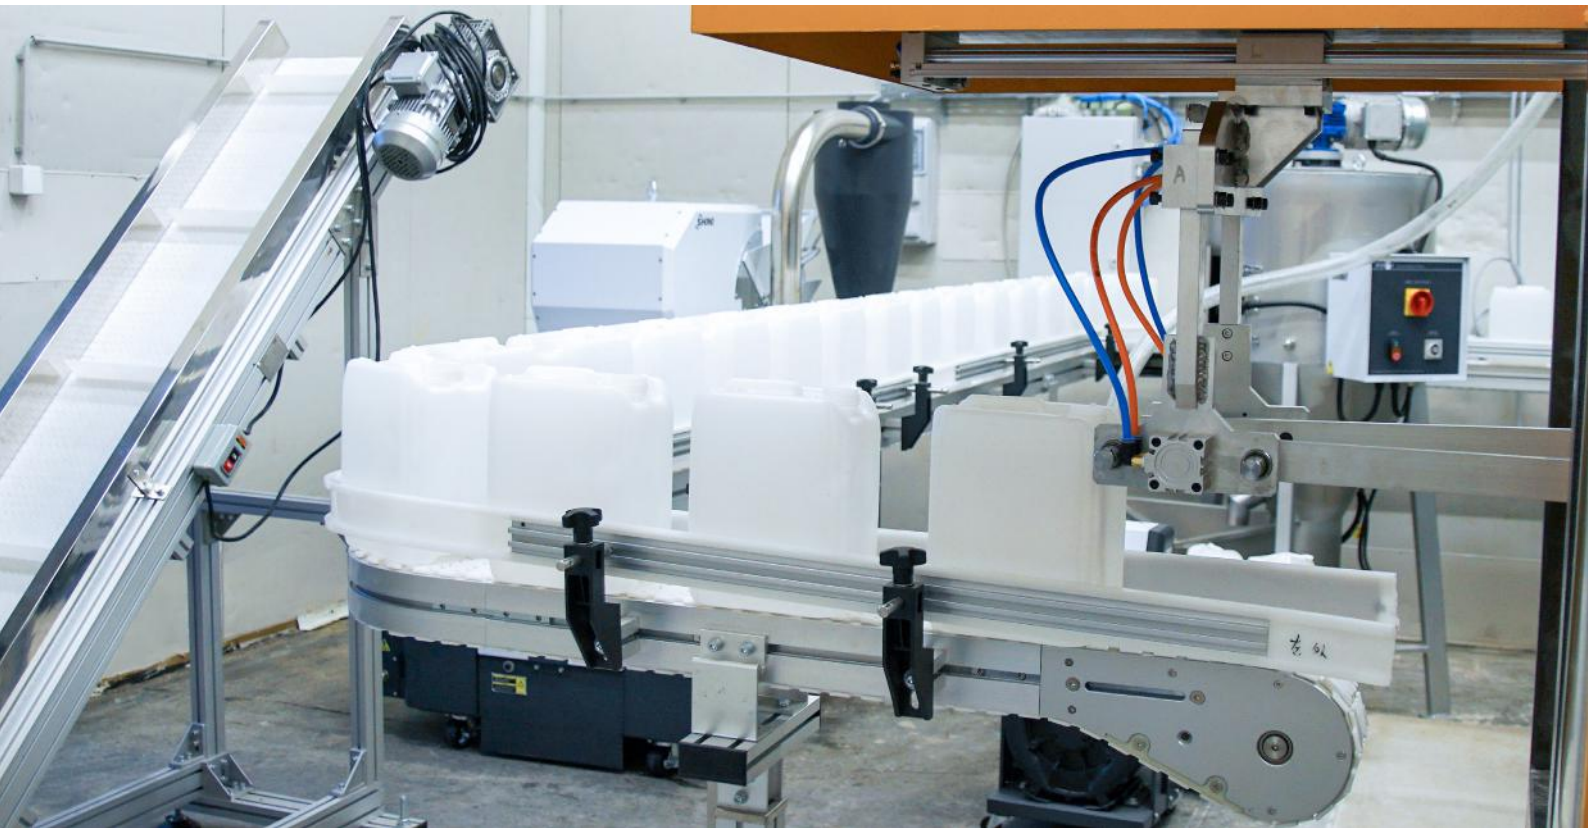

Technologically advanced production line enables a safe working environment.

# PRODUCTION OF RENEWABLE BOTTLES

We strive for production integrity and sustainability. Our advantage is that we produce our own plastic bottles which we also fill with cleaning agents and disinfectants. By direct transport of new bottles to filling line, we eliminating human contact and contamination risk, we ensure the final product is clean and

faultless. With buying our products you reduce CO2 emissions with eliminating transport of empty bottles from bottle producer to filling line. We are reducing the consumption of PVC foil as there is no need for additional wrapping of empty bottles. All plastic waste generated in the injection molding process is recycled and reused in

the production of new bottles. Additionally, we recycle used or faulty bottles from own or foreign production. Based on your needs, we can produce bottles with volumes ranging from 500ml to 5L. The plastic material used is HDPE (high density polyethylene) which can be of high quality i.e. new or recycled. Each bottle quality is tested before use.

# POLNILNA LINIJA

CONTRIBUTE TO ENVIRONMENTAL SUSTAINABILITY BY USING OUR PRODUCTS

In the ATEX mixing room, we prepare disinfectants and cleaning agents according to our or your formulation or one of Europe's most efficient formulations. The product is poured into bottles on the automated filling line. We can also fill, label and pack your ready-made products without the knowledge of your formulation. Filling line can be adjusted for a variety of product types depending of viscosity, chemical safety, corrosiveness etc. as well as for different types and volumes of bottles, ranging from 100ml to 10L. The bottles are capped, labeled and equipped with lot and due date. You receive finished products packed in boxes, which can be branded according to your logo and CGP design. Eco-friendly-produced products packed on pallets are awaiting transport to your facility.

***By buying from Bent production, you are contributing to chemical safety, recyclability and a low environmental impact.***

# WHY CHOOSE BENT?

## YOU ARE NEVER ALONE WITH US

The expert group Bent includes professionals from diverse fields including chemistry, sanitary engineering, biotechnology, physics, economics and other. This enables us to provide a comprehensive service for the production of chemical products such as disinfectants and cleaning agents for various uses.

We produce and supply products of the highest quality which are certified according to relevant EU legislature. At the same time, we offer our clients support, training and consultation in order to find optimal solutions for emerging problems.

## TRADITION

Our company has been present in the cleaning sector for over 50 years. We started out in 1971 as a cleaning service by providing cleaning machines and equipment to customers. In 1991, Bent expanded to other countries, i.e. Croatia, Bosnia and Hercegovina as well as Serbia. The experience we gained through the years, enabled us consistently grow our company and enlarge our

portfolio of products and services. Besides cleaning equipment and cleaning agents, we also offer disinfectants which are suitable for surfaces as well as hands. We closely follow modern trends in the cleaning industry in order to provide the best and most efficient service for our local and global clients.

## ECOLOGY

Our environment is important to us, therefore we are developing and offering solutions which are eco-friendly. Consequently, we are incorporating sustainable practices and circular economy principles in our production as well as distribution processes. We strive to be an innovative and ethical member of the industry.

We advise customers on how to properly use cleaners and disinfectants to prevent damage to surfaces and ensure surface protection using appropriate coatings. This secures the durability of surfaces. At the same time, we educate our employees as well as customers on proper ecological cleaning procedures and ecological cleaning agents.
